Mateo Nicolás Iriso

Full Stack Developer | Java Backend (Spring Boot) | React and React Native

Córdoba, Argentina (UTC-3) | +54 9 351 3924-715 | mateoiriso@gmail.com | linkedin.com/in/mateoiriso | mateoiriso.com

SUMMARY

Full Stack and Java Backend Developer with 2+ years of experience building and running production systems for clients. I design REST APIs with Java and Spring Boot, build web frontends in React and Android apps in React Native (Expo), and deploy on AWS with Docker and GitHub Actions. Experienced in Spring Security and JWT authentication, unit testing with JUnit and Mockito, and production monitoring with Grafana, Loki and Prometheus. I use Claude Code daily for development and testing.

EXPERIENCE

Full Stack Java Developer (freelance) | Client: MYM Distribuidora **02/2025 - Present**

End-to-end order management system: customer orders, delivery assignment and tracking, credits and payments.

- Built and shipped a React Native (Expo) Android app to production, used by ~65 delivery drivers and customers.
- Designed and implemented REST APIs in Java with Spring Boot, Spring Data JPA, DTOs with MapStruct and MySQL (SQL).
- Implemented reassignment of leftover products from partial or cancelled orders, with pricing rules based on the original order.
- Built the web frontend in React.
- Integrated Google Maps with geographic zones and automatic order classification by zone.
- Implemented security with Spring Security, JWT authentication, secure cookies and environment variables for credentials.
- Manage AWS infrastructure (EC2, RDS, S3) with automated deployment using Docker and GitHub Actions CI/CD.
- Wrote unit tests with JUnit and Mockito, generating and reviewing them with Claude Code.
- Monitor the production backend with Grafana, Loki and Prometheus.

Tech: Java, Spring Boot, Spring Security, JWT, Spring Data JPA, MapStruct, MySQL, React, React Native, Expo, AWS, Docker, GitHub Actions, JUnit, Mockito, Grafana, Loki, Prometheus

Full Stack Java Developer (freelance) | Client: EFE Electrónica **06/2024 - 09/2025**

System to manage and version automotive modules for a diagnostic hardware device.

- Gathered requirements and proposed the system architecture.
- Designed and implemented REST APIs in Java with Spring Boot, using DTOs with MapStruct.
- Built a desktop application in Python with PyQt5.
- Wrote backend unit tests with JUnit and Mockito.
- Stored and versioned module files on Amazon S3.
- Deployed on AWS EC2 with JWT authentication and CORS configuration.

Tech: Java, Spring Boot, MapStruct, MySQL, Python, PyQt5, AWS (EC2, RDS, S3), JWT, JUnit, Mockito

Web Developer (freelance) | Various clients **2026**

- Build websites in React for small businesses using Claude Code. Example: anagottardi.com.ar

SKILLS

Backend: Java, SQL, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, JPA, MapStruct, Maven, REST APIs, RESTful

Frontend and mobile: React.js, React Native (Expo), JavaScript, HTML, Material UI

Databases: MySQL, SQLite

Cloud and DevOps: AWS (EC2, RDS, S3), Docker, CI/CD, GitHub Actions, Git, GitHub

Testing and monitoring: JUnit, Mockito, Grafana, Loki, Prometheus

AI tools: Claude Code
Also used: Python, PyQt5, C#, .NET, Vue.js, Scrum and Jira (academic projects)

EDUCATION

Systems Analyst (technical degree), Instituto Superior Santo Domingo, 2024. Second-highest GPA in the class.

Chemical Engineering (3 years completed), National University of Córdoba (UNC), 2018.

LANGUAGES

English: upper-intermediate (B2), TOEIC and TOEIC Bridge. Technical interviews conducted in English. Spanish: native.

AWARDS

First place, Hackacode by TodoCode Academy (2024). Built the frontend of a Booking-style reservation website with React and Material UI.
